

1 Certify the instance

Draw a graph $\mathcal{G}$
and a query Q

ID decides whether Q
is identifiable in $\mathcal{G}$

Certified instance $(\mathcal{G}, Q, \ell)$

2 Query the system

Prompt: graph and query
(label ℓ withheld)

The system replies
in free text

Parsed response $(v, \hat{\tau})$

3 Score the response

Compare the verdict v
with the label ℓ

correct refusal

false claim

correct claim

miss

Verify $\hat{\tau}$
on SCMs

verified

refuted

$Q = P(y \mid \text{do}(x))$
ID returns $\ell = \text{FAIL}$

reply: "IDENTIFIABLE,
 $\hat{\tau} = P(y \mid x)$ " $\Rightarrow v = \text{ID}$

$v = \text{ID}$ but $\ell = \text{FAIL}$
 $\Rightarrow$ **false claim**
